The Jacket measurements which go up in chest sizes correspond with the other measurements on the chart. For Off the Peg the chest size will decipher your waist, seat, length and sleeve length.

Measuring the Chest

Raise your arms and run the tape around the chest, up into the armpit, horizontal to the floor and over the shoulder blades. Lower the arms after positioning the tape. This is the chest measurement, but it should not be too tight; a couple of fingers worth of ease is allowed.

Measuring the Waist

Run the tape around the waist about 2" below the rib cage, approximately wear the jacket will be fastened. This measurement should have a finger or two of ease.

Measuring the Seat

Standing with your feet together, run the tape around the widest part of the seat/hips. The tape must run smoothly up and down, neither too loose nor too tight. The amount of flare or figure hugging is adjusted with this measurement.

Measuring Full Length

This is the measurement from the bottom of the collar, down the back seam of the jacket to the desired length.

Measuring Crown to Cuff

Measure from the center of the cuff up to the top of the shoulder.
